### **DETAILED ACTION**

1. This Office action is in response to the Amendment filed 12/28/2009. Claims 1-33, 37 and 39-53 have been cancelled. Claims 34-36, 38 and 54-64 are now pending.

#### *Allowable Subject Matter*

2. Claims 34-36, 38 and 54-64 are allowed.
3. The following is an examiner's statement of reasons for allowance:

The present claims are allowed over the closest references: Golden et al. (DE 19803891).

Gordon et al. disclose aqueous precious metal colloids intermediate for supported catalyst in the form of a sol with metal particles of 0.5-100 nm. The colloids can be obtained by reduction of a precious metal salt or complex dissolved in water by using an organic reducing agent in the presence of a water soluble polymer and optionally in the presence of multivalent anions (Abstract). Aqueous solution of  $H_2PtCl_6$  and water was mixed. In a second vessel polyvinylpyrrolidone and sodium citrate dihydrate in water was dissolved. The two solutions subsequently mixed and bottom reflux up to the boiling point (page 4, Example 1). However, Gordon et al. do not teach or fairly suggest the claimed colloid solution, method to produce and use the colloid solution, which comprises metal particles or metal compound particles being formed from one metal used in an integrity test for a virus removal membrane comprising: (1) from 0.0001 to 0.1 wt% of metal particles or metal compound particles being formed from one metal having an average particle diameter of 15-40 nm, (2) a water-soluble high molecular weight dispersant containing a pyrrolidone group, (3) water, and (4) an anionic surfactant and/or a chelating agent, wherein all of the metal particles or metal compound particles of the colloid solution are formed from said one metal have an average particle size diameter of 15-40 nm, and

the colloid solution has the following properties (a) and (b): (a) a maximum absorption wavelength after 180 days storage at room temperature and at a constant pH in a range from pH 4 to pH 11 which differs from the maximum absorption wavelength prior to storage by -2.0 nm to +2.0 nm, and (b) a maximum absorption wavelength after one year storage at 50°C and at pH 5 which differs from the maximum absorption wavelength prior to storage by -2.0 nm to +2.0 nm.

There is no prior art of record, alone or in combination teach or fairly suggest the claimed colloid solution, method to produce and use of the metal colloid solution.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
